 - iPhone and iPad with Wireless Transmitter
- » Software & Hard-Sided Case Included

Benefits:

- » View Hard to See Pathology
- » Show Pathology to Client in Real-Time
- » Easily Save Images or Video to Windows, Android or iOS Devices

The Tele-View[®] Equine Dental Camera is an innovative product that allows equine practitioners to easily image teeth and gums of equine patients. The live image can be viewed on Windows computers, laptop and tablets, Android cell phones and tablets and iPhones/iPads. This innovative product includes a high definition camera, LED lights with a 'light boost' switch and an irrigation channel to clean the camera lens without removing from the mouth. These components are incorporated into a durable stainless steel housing.

The included software can be installed on all Windows devices and the Mac software can be downloaded. For use with Android and iOS devices, applications are available. For iOS devices, an optimal wireless transmitter must be purchased. Images and video can be saved to the hard drive of any of these devices.

The distal portion of the Equine Dental Camera is waterproof and can be sterilized with typical cold sterilization products such as glutaraldehyde. The weight of the Dental Camera is 1.4 pounds (0.63kg), the length is 21.25 inches (54cm), the diameter is 0.70 inches (1.8cm) and the tip angle is set at approximately 60°.
